

2.1 methodology

Introduction

In this project, two main techniques were used to gather requirements for the university activity application. The aim was to understand and identify the features that would meet students' needs and preferences when using the application. Questionnaires and research on existing systems were used. These methods helped obtain user feedback and identify both functional and non-functional requirements for the application.

Questionnaire

The questionnaire was the main requirement gathering technique used in this project. It was designed to collect information from university students about their participation in extracurricular university activities and their experiences with the current methods of receiving activity information. The questionnaire included multiple-choice and true/false questions, making it easier to collect and analyze responses.

The questionnaire focused on:

- Students' university activity interests.
- How frequently do they participate in them.
- The methods used to inform about upcoming events.
- Searching preferences for activities.
- Categories they would like to see available in the application.
- The type of activities they would like the application to display.

It also considered:

- Students' opinions on activity notifications.
- The ease of using university related applications.
- The benefits of having all university activities available on one platform.

The gathered responses provided valuable insights into students' needs and preferences. The results helped identify the requirements for the proposed application and determine the key requirements needed for the system.

Research and Analysis of Existing Systems

In addition to the questionnaire, another technique used to support the requirement gathering process was researching existing events and activity management applications, including Hadath, Smart Campus, UTHM Event Central, and SMS Reminders. The purpose of this research was to identify common features and best practices that could be applied to the proposed application.

The analysis showed the importance of:

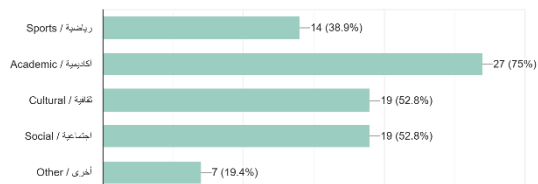

- A centralized platform for event discovery, registration, and notifications.
- Providing access to university activity information from a single application.
- Recommendation features that suggest activities based on the users interests and preferences.
- Improving activity discovery and helping students find relevant events.
- Making the users' experience easier by using centralized event management.
- Event reminders and notification services.

Overall, the analysis of these existing systems helped identify important requirements for the proposed application, including activity categorization, centralized event information, event notifications, user-friendly activity discovery, and registration support. The research supported the results obtained from the questionnaire and provided a stronger basis for defining the system's features.

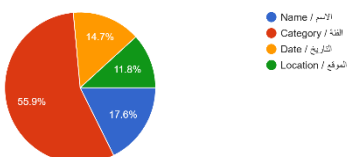

Conclusion

The requirements for the proposed University Activities Application were gathered through questionnaires and research. The questionnaire provided direct feedback from students, while the research identified common practices and useful features from similar systems. Together, these techniques provided a strong foundation for defining the system requirements and designing an application that meets users' needs.

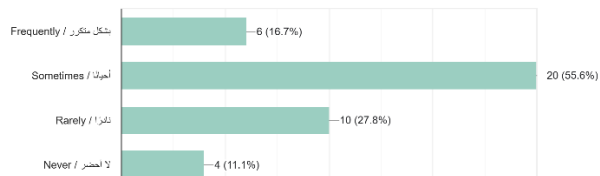

What type of activities are you most interested in? ما أنواع الأنشطة التي تهتم بها أكثر ؟
36 responses

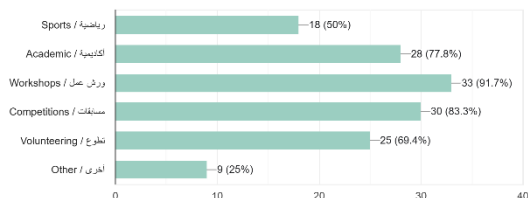

I prefer searching for activities by... أفضل البحث عن الأنشطة عن طريق...
34 responses

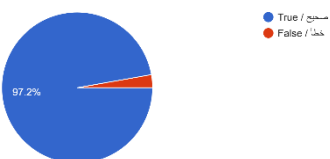

How often do you attend university activities? كم مرة تحضر الأنشطة الجامعية ؟
36 responses

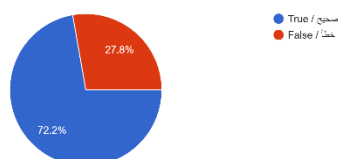

I want these categories to be available in the app: أرغب في وجود هذه الفئات داخل التطبيق:
36 responses

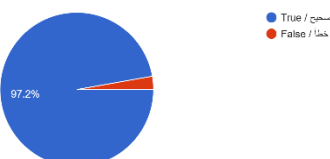

I would like to receive notifications for upcoming activities. أرغب في تلقي الإشعارات بالأنشطة القادمة.
36 responses

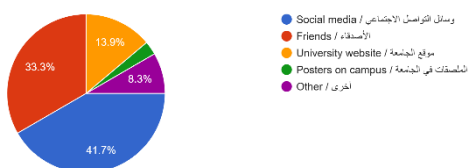

I find it easy to use apps for university activities. أجد أنه من السهل استخدام التطبيقات الخاصة بالأنشطة الجامعية.
36 responses

I think having all activities in one place makes it easier to stay updated. اعتقد أن وجود جميع الأنشطة في مكان واحد يجعل متابعة المستجدات أسهل
