Pre-conditions	Students are viewing the available events.
Post-conditions	Detailed information about the event is displayed.
Main course	1. Students select the event. 2. System retrieves the event details. 3. System displays the event information, including date, time, location, and description.
Alternate courses	The student returns to the event list and chooses another event.
exceptions	Event information is unavailable or cannot be loaded due to a system error.

Viewing Participants Use Case

Use Case Name Viewing Participants

Primary Actor Event Organizer

Description Allows the event organizer to view the list of participants registered for an event they manage.

Preconditions
- The event organizer is logged in to TaibahEvents.
- The event organizer has an event assigned to them.

Postconditions
- The system displays the registered participants for the selected event.
- No participant information is changed.

Main Flow
1. The event organizer logs in to TaibahEvents.
2. The organizer opens an event they manage.
3. The organizer selects the participants section.
4. The system retrieves and displays the list of registered participants.
5. The organizer reviews the participant information.

Checking Attendance Use Case

Use Case Name Checking Attendance

Primary Actor Event Organizer

Description Allows the event organizer to review and record the attendance status of participants for an event they manage.

Preconditions
- The event organizer is logged in to TaibahEvents.
- The event organizer has an event assigned to them.
- A participant list is available for the selected event.

Postconditions
- The attendance status is saved for participants whose status was updated.
- The system displays the updated attendance information.

Main Flow
1. The event organizer logs in to TaibahEvents.
2. The organizer opens an event they manage.
3. The organizer selects the attendance section.
4. The system displays the registered participants and their current attendance statuses.
5. The organizer marks each relevant participant as present or absent.
6. The organizer saves the attendance records.
7. The system saves the changes and displays a confirmation.

Use Case: Register for an Event

Use Case Name	Register for Event
Primary Actor	Student
Description	Allows the student to register for an upcoming campus event and receive confirmation.
Preconditions	1. Student is logged into the system with an active account. 2. Event exists and its status is "Active" / "Published".
Postconditions	1. A new registration record is stored in the database linking the student and event. 2. Event capacity count is decremented by 1. 3. Confirmation sent.
Main Flow	1. Student navigates to the Event Details page. 2. System checks if student is eligible to the event's requirements and hasn't registered already. 3. System verifies open capacity. 4. Student clicks **"Confirm Registration"**. 5. System creates registration record with status CONFIRMED. 6. System updates remaining available capacity
Alternative Flows	• **Student already registered** ○ At Step 2: System detects existing registration. ○ System replaces "Register" button with "Registered" or "Cancel Registration".

Use Case 2: Cancel Event Registration

Use Case Name	Cancel Event Registration
Primary Actor	Registered Student
Description	Allows a student to cancel an existing registration.
Preconditions	1. Student is logged into the system. 2. Student has an active CONFIRMED registration for the target event.
Postconditions	1. Registration status changes to CANCELED. 2. Event capacity increases by 1. 3. Cancellation confirmation email is sent.
Main Flow	1. Student navigates to "My Events" section and selects an event. 2. Student clicks **"Cancel Registration"**. 3. System prompts student for confirmation: *"Are you sure you want to cancel?"* 4. Student confirms cancellation. 5. System updates registration record status to CANCELED. 6. System increments available event capacity. 7. Cancellation success message displayed. 8. System sends cancellation confirmation email to the student.

Create Event – Use Case Flow

Use Case Name
Create Event

Primary Actor
Event Organizer

Description
Allows the Event Organizer to create a new event by entering its details.

Pre-condition
The Event Organizer is logged in to the system.

Trigger
The Event Organizer selects Create Event.

Main Flow
1. The organizer selects Create Event.
2. The system displays the event form.
3. The organizer enters the event details, such as the title, description, date, time, location, and registration information.
4. The organizer reviews the details and selects Save.
5. The system checks that the required information is complete and valid.
6. The system saves the event as a draft.

Alternative Flow

A1. Cancel Event Creation
7. The organizer selects Cancel.
8. The system discards the unsaved information and returns to the previous page.

A2. Save as Draft
9. The organizer saves the event as a draft.
10. The organizer can open the draft later and continue editing it.

Exception Flow

E1. Missing or Invalid Event Information
11. The system displays an error message.
12. The organizer corrects the information and tries again.

E2. System Error
13. The system displays an error message if it cannot save the event.
14. The organizer can try again.

Post-condition
The new event is saved as a draft and can be edited before it is published.

THANK YOU!
