

Group 4

Taibah Events Application

Scientific Background

Hadath 2023	Centralized event management Discovery, registration & notifications System modeling: DFD & sequence diagrams
Smart Campus 2026	Personalized event recommendations Content-based recommendation Timetable analysis
UTHM Event Central 2025	Centralized events & analytics Agile development ML recommendations & participation prediction
SMS Reminders 2024	Event registration & reminders Rapid Application Development (RAD) Automated SMS notifications

Questionnaire results

Key findings • 36 responses; search preference: 34 responses

Activities students want

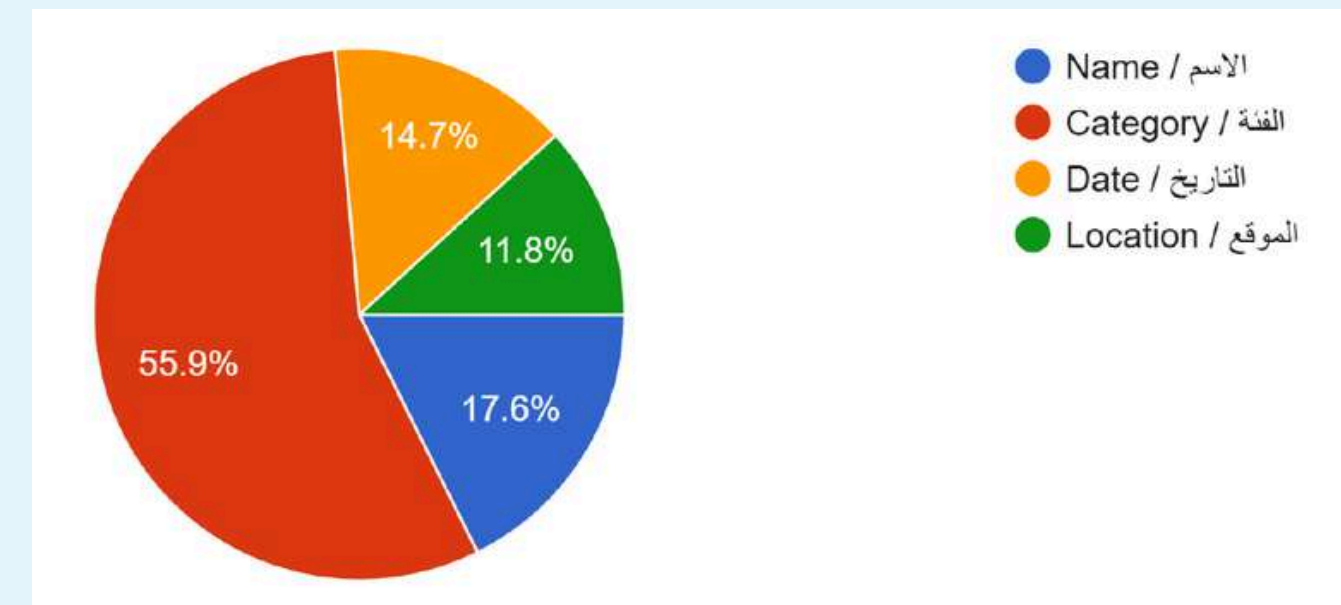

Workshops (91.7%) and competitions (83.3%) are the most requested categories, suggesting interest in practical and competitive activities.

97.2%

Want notifications: 35 of 36
Yes: 97.2% • No: 2.8%
Reminders help students remember events.

How students prefer to search

Most students prefer category search (55.9%), so grouping events by type can make suitable activities easier to find.

97.2%

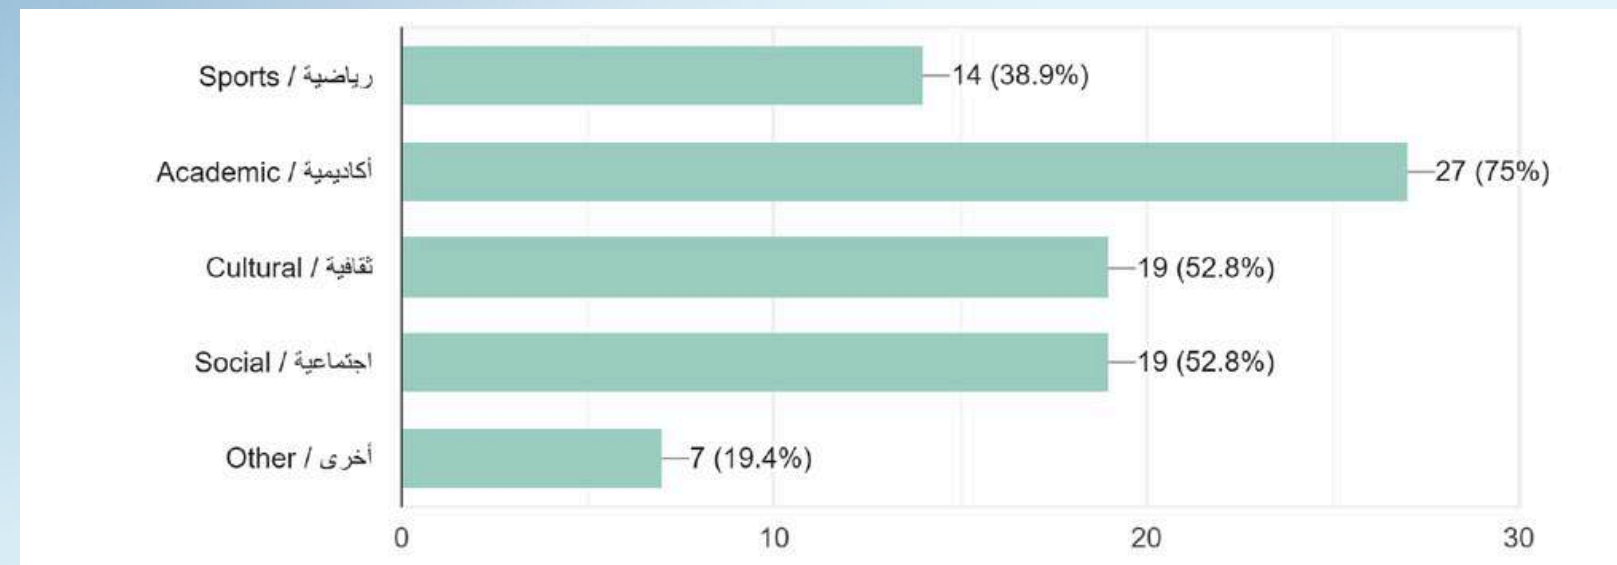

Say one place makes updates easier
Yes: 97.2% (35/36) • No: 2.8% (1/36)
A central list keeps students informed.

Source: University Activity Application survey • Students could select more than one activity category.

Interests and attendance

Student interests and participation • 36 respondents

Which activities interest students?

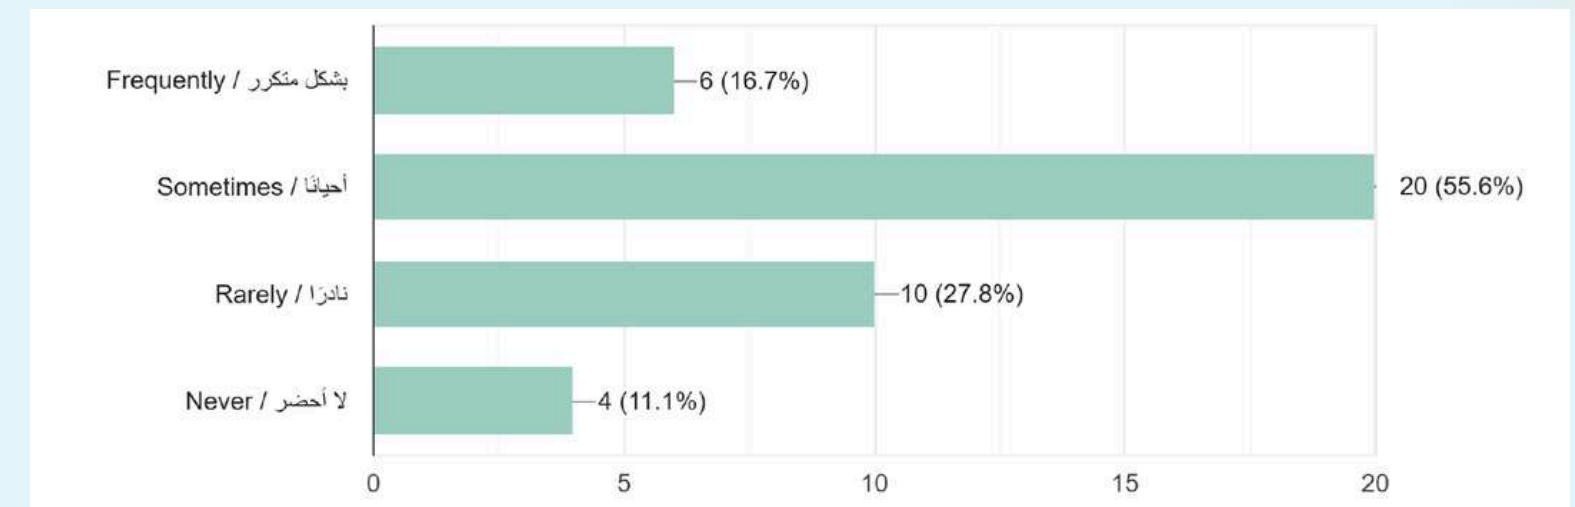

Academic activities lead at 75%. Cultural and social activities each attract 52.8%, showing interest in a varied event list.

For our application

Offer different activity categories so students can find events that match their interests.

Source: University Activity Application survey • Students could select more than one area of interest.

How often do students attend?

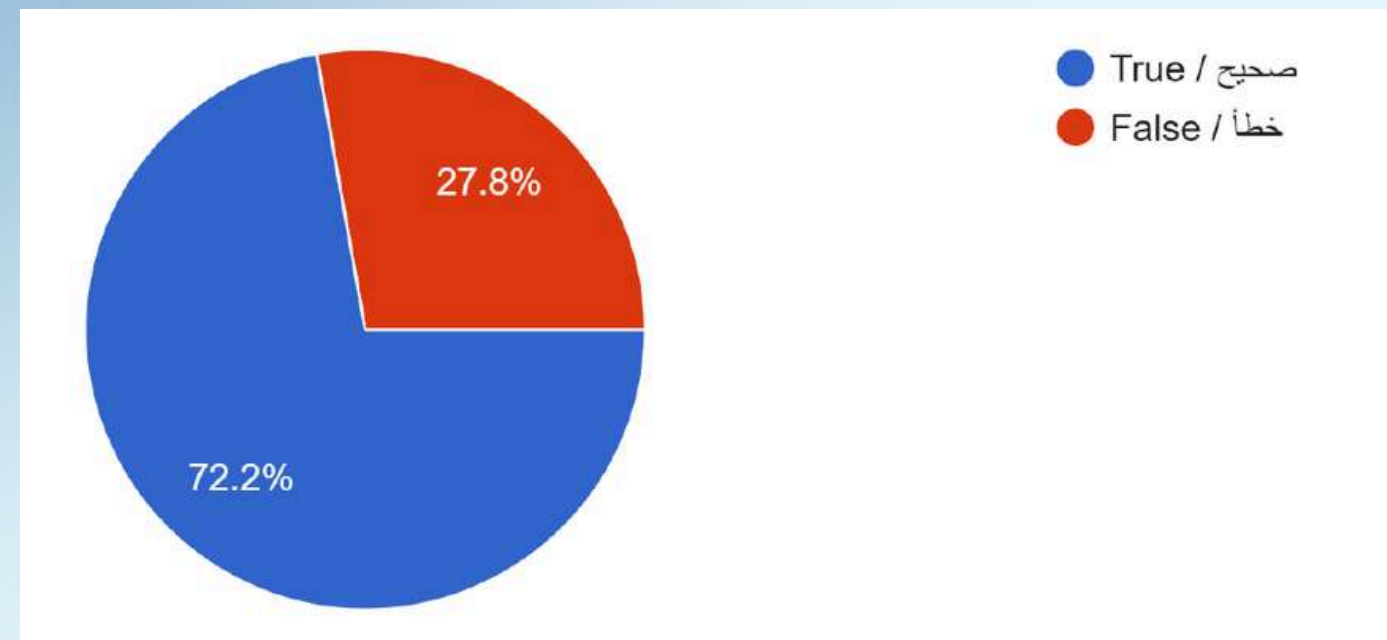

Most respondents selected “sometimes” (55.6%), compared with 16.7% who attend frequently. Participation appears to be occasional.

Usability and event discovery

Survey findings • 36 responses for each question

Are activity apps easy to use?

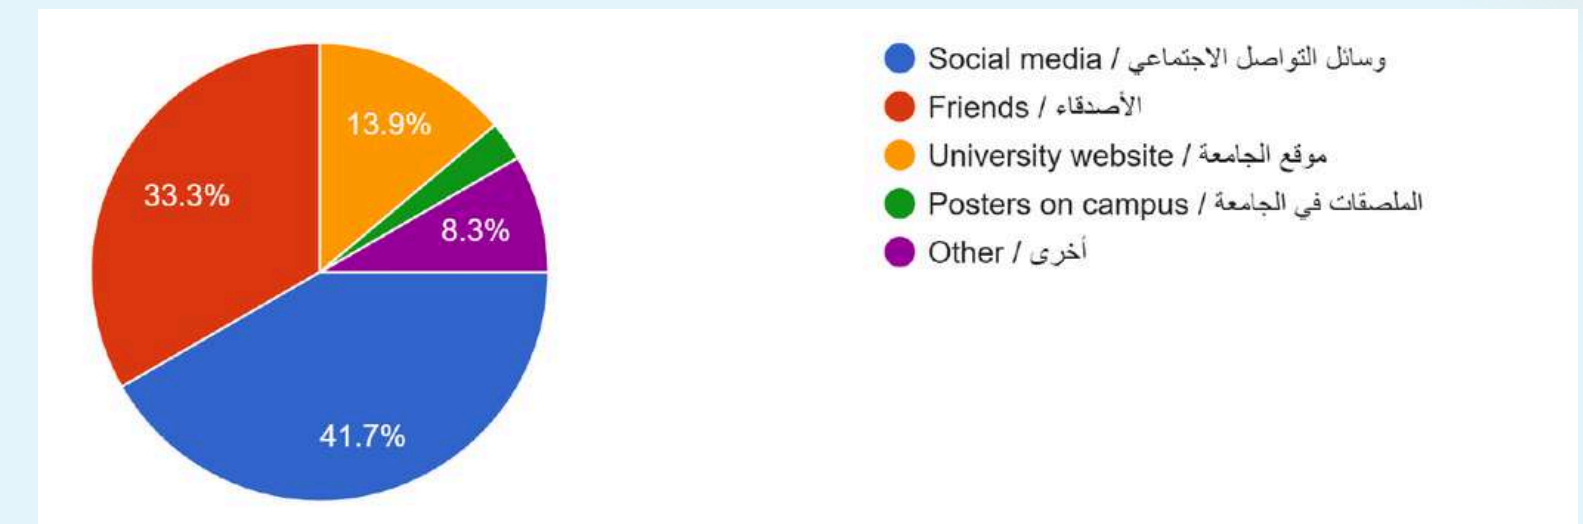

Although 72.2% find activity apps easy to use, 27.8% do not. Simple navigation could make the app easier for this group.

For our application

Use clear navigation and a short registration process.

How do students hear about events?

Social media (41.7%) and friends (33.3%) lead. Fewer students use the university website (13.9%) or other sources (8.3%).

Campus posters

Only 2.8% learn about activities through campus posters. Sharing event links online could help more students discover activities.

Source: University Activity Application survey • Campus posters: 2.8%, calculated from the remaining share.

Preferred activity sources

Survey findings • 36 responses

Which activities should the application show?

Over half (55.6%) want activities from across the university, suggesting interest in events beyond their own departments.

55.6%

All university departments
20 of 36 respondents

What this means for our application

A university-wide event list would give students more choice. Department and club filters would help them find relevant activities.

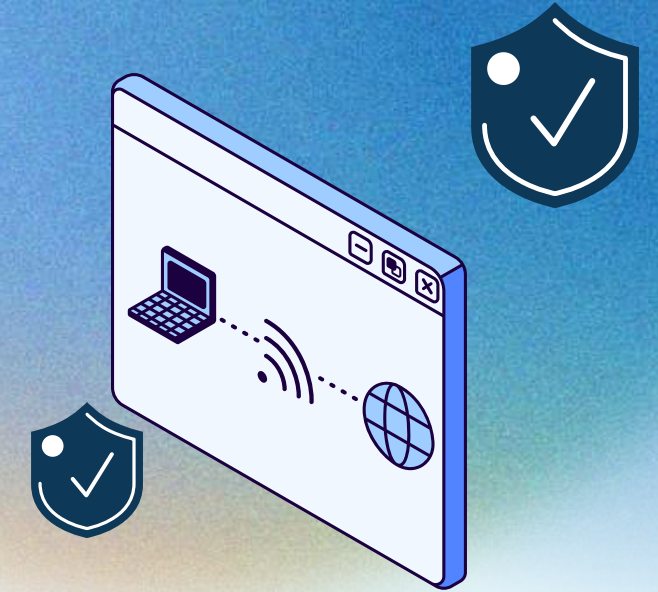

Other preferences

36.1%: clubs and student groups (13/36)
8.3%: their own department only (3/36)

Source: University Activity Application survey • Response counts calculated from percentages and 36 respondents.

Requirements

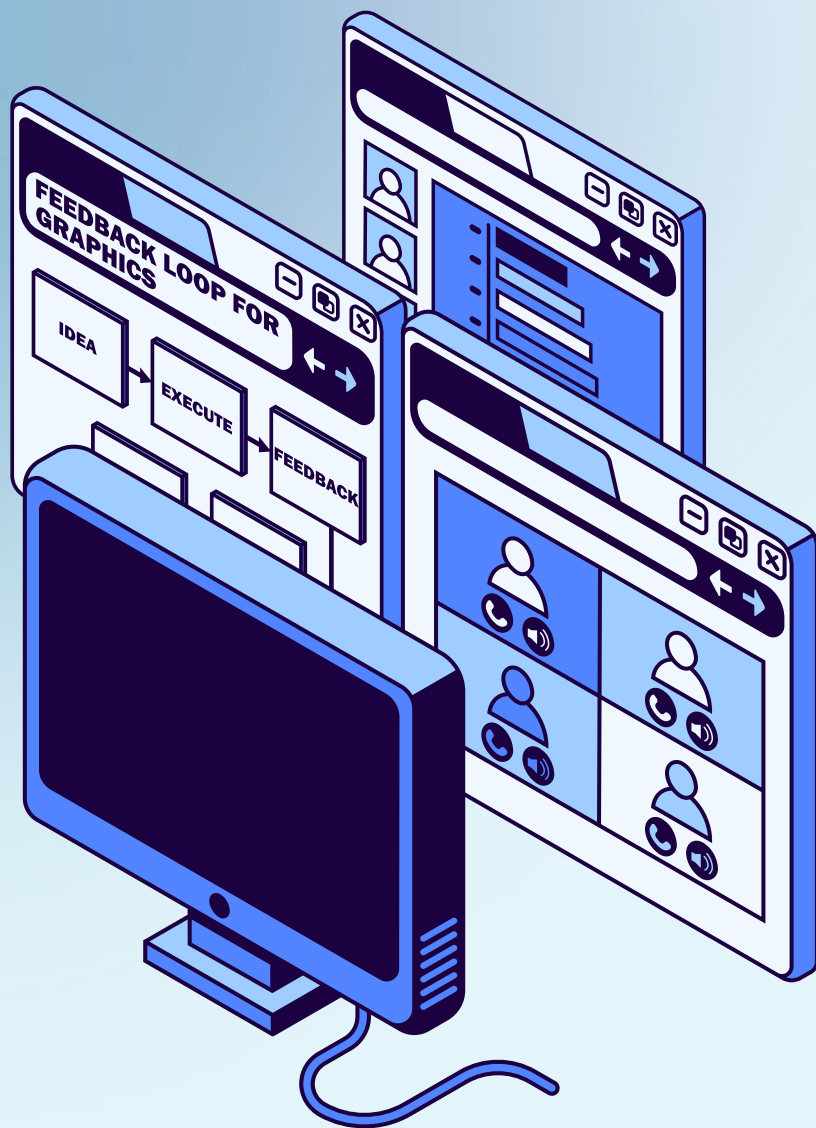

Functional requirements

- **User roles and access control.**
- **Core system features and use cases.**
- **Data processing and search functions.**

Non-functional requirements

- **Security:**
Protect user accounts and personal data.
- **Performance target:**
Response time: 2–5 seconds.
